

Remote Back-Up

DataCare Solutions

Helping you manage Disaster Recovery with Remote Back-Up

In response to recent enquiries and following the publication of the Solicitors Code of Conduct 2007 by the Solicitors Regulation Authority, DataCare Solutions has decided to introduce a Remote (off site) Back-Up service to assist its clients in the formulation of a meaningful Disaster Recovery Plan. As part of your periodic review of your company's risk profile you may wish to consider the enhanced security this service will provide.

DataCare Solutions recommends all its clients formulate a Disaster Recovery Plan which should encompass all their IT network hardware, software and data. Typically, companies grow and change as a regular part of their development and their Disaster Recovery Plan must change accordingly. They should monitor all aspects of their plan on a regular basis.
