Solutions

...making sure the Web delivers for you

DataCare Solutions bespoke Web Monitoring Software gives you total control over what your employees can view on the Web and when they can browse. You can totally monitor Web usage and either restrict particular Web sites at certain times for some personnel or block them altogether.

- Block individual sites or block sites to individual users
- Block off or restrict all internet access to specific users
- Monitor sites visited by each user
- View statistics of most visited sites
- Show usage statistics as graphs and other formats
- Search by site or by date/time for internet usage

...saving you time and money by filtering your SPAM

- Want to improve your e-mail service?
- Stop your employees spending time sifting through annoying, irrelevant and often grotesque SPAM.
- Do you want all that SPAM filtered out before it gets to your users?
- You need our Managed SPAM Filtering service!
- We have a dedicated SPAM Filtering server that will delete SPAM before it arrives on your system.

After separation at our server your SPAM will be sent to a dedicated SPAM folder in your e-mail which can be checked by you periodically and emptied. There is no possibility of losing e-mails, as with many systems, since you have the opportunity to monitor and delete your SPAM. Certain e-mails may not be initially recognised as SPAM but this will be a rare occurrence and these e-mails are merely transferred by you to a LEARN AS SPAM folder. They will not be let through the filter again. **As soon as you are happy that all e-mails selected are SPAM simply inform DCS and our server will stop forwarding your SPAM.**
